

## **Holly Witchell**

### **Under pressors | *Holly Witchell***

We will be discussing the use of vasopressors in critical patients, the nurse's role in managing these patients and what types of monitoring we should be using. Including pharmacology of these types of drugs used and their effects on the patient.

### **Let's stick together- diving into the nitty gritty of coagulation, covering coagulopathies, platelet's role, cascade and viscoelastic testing | *Holly Witchell***

During this lecture we will discuss the cell-based model and the coagulation cascade, also looking into platelet's role being more than just a plug. I will touch upon viscoelastic testing and how it can aid us in our patients care.

### **Riding the waves- introduction into ventilator wave forms | *Holly Witchell***

We will be discussing wave form interpretation, what these mean for our patient's in the ICU setting, and when to worry. Basic waveform interpretation enables nurses to better understand our patients respiratory function and aid in their nursing management whilst being mechanically ventilated.
